Left: From *Management of Severe Pediatric Subglottic Stenosis With Glottic Involvement*. Extended partial cricotracheal resection for the cure of combined subglottic and posterior glottic stenosis. The completed anastomosis and LT-Mold are fixed with Prolene sutures (Ethicon, Inc, Somerville, NJ).

Center: From *Vagal Denervation and Reinnervation After Ablation of Ganglionated Plexi*. Panel represents atrial activation maps constructed from sinus rhythm without vagal stimulation (A), sinus rhythm with vagal stimulation before ablation (B), and sinus rhythm with vagal stimulation immediately after ablation (C). Maps represent lateral view in right atrium. Asterisks in-

dicate earliest activation site in right atrium. Atrial activation is shown with color coding in 10-ms increments. *Numbers below figure* indicate sinus interval times in each activation. RAA, Right atrial appendage; SVC, superior vena cava; RPV, right pulmonary vein; TV, tricuspid valve; IVC, inferior vena cava.

Right: From *A Rare Coronary Artery Anomaly: Origin of the Right Coronary Artery From an Aortico-Left Ventricular Tunnel*. Origin of the RCA from the ALVT. Collaterals from the left coronary artery to the RCA. LCx, Left circumflex; RCA, right coronary artery; ALVT, aortico-left ventricular tunnel; R, right; H, head.
